Resusci Junior Q CPR

Measure To Improve

Since 1960, the Resusci range has been the preferred CPR training manikins for healthcare professionals and trained more than 500 million people in critical life saving skills.

An estimated 2,5 million lives have been saved.

Using the Resusci Junior Q CPR with your preferred feedback option will ensure you can track, measure and improve pediatric training for every student.

Realistic compression and ventilation

Conducting CPR on a child is a rare occurrence, so learning how it feels to perform CPR correctly is important to maximize the chance of survival during those critical moments of a child's resuscitation.

We consulted pediatric experts experienced in practical child CPR to ensure realistic resistance when compressing and appropriate chest rise when ventilating. Resusci Junior QCPR is fully Guideline compliant.

Compatible feedback options

Logging of events

Detailed feedback

Results for debrief

SimPad PLUS with SkillReporter is the preferred feedback option for the professional provider. It includes detailed feedback on CPR performance parameters and a timeline for logging events during scenario based team training. The SimPad PLUS is connected via Bluetooth, either to one manikin when in Learner Mode or up to 6 manikins when in Instructor Mode.

QCPR Learner and QCPR Instructor apps

SkillGuide

Focus on quality pediatric BLS training

Practical & Portable - with a carrying case that doubles as training mat and an ability for battery or mains power operation.

Minimal set up time - wirelessly connect to SimPad PLUS with SkillReporter and the QCPR Learner and Instructor apps, or plug in a SkillGuide.
